

# Nowina Solutions

Efficiency and Trust in a paperless world

## EVA - Document Signature Platform

With the integration of eSignature, EVA is the solution for the digitalization of business processes legally sanctioned by signature such as contracts.

To ensure full paperless initiatives, EVA provides an ergonomic, secure and remote way of signing documents with smartcards (such as eID) or CryptoSMS. The platform produces eSignatures compliant with eIDAS regulation and eSignature Directive, e.g. legally equivalent to handwritten signatures. The platform includes essential features as the validation of

any electronic signature and the generation of audit trails.

EVA can be connected to external systems (document generation, ECM, ...) through WebServices therefore enabling easy integration into any existing infrastructure. Enabling the creation and execution of document signature workflows, the platform provides WebServices to prepare and sign a document, validate and extend affixed signatures, and preserve the document.

### 1. EVA at a glance

## 2. EVA features

- + Legally binding paperless**
  - Suited for all legally binding processes, even requiring signature
  - Producing eSignatures compliant with eIDAS regulation and electronic eSignature Directive
  - Producing proof of signature file from stored evidence records
  - Validating all digitally signed documents against your specific Validation policies
- + EU interoperability**
  - Supported and powered by SD-DSS, the EU reference implementation for eSignature
  - Accepting Smartcard or Token from any EU country
  - Signature produced with any EU eID solution
- + Standardized**
  - Support international standards to ensure interoperability with other softwares
- + Fully secure**
  - Qualified Electronic Signature (QES) using Qualified Certificate
  - Advanced Electronic Signature (AdES) using i.e. CryptoSMS
  - Document integrity guaranteed
  - Ultra-fast and reliable revocation checking against robust CRL pre-processing
- + Flexible**
  - A fully customizable solution addressing all specific needs
  - Easy integration into existing infrastructures
  - Deployment flexibility: the solution can be deployed on premises or in the cloud
  - Multilingual
  - Personalized branding
- + Mobile ready**
  - Platform compatible with mobile thanks to CryptoSMS, OTP or Soft-Token and mobile specific application

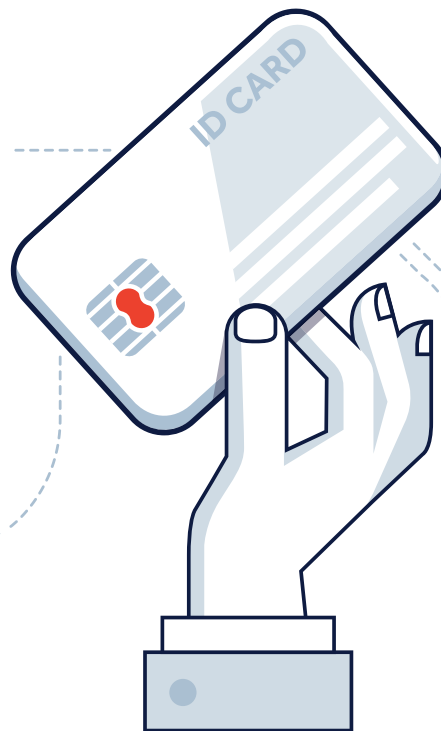

## 3. EVA benefits

### Increased Efficiency

- Ready to use: Signature in the browser without plugin or Java Applet
- Fast and reliable validation of documents
- Prompt time to market and reduced new product development
- Total quality and consistency
- Improved response time and client service

### Standardised

- Legal standard solution admitted across EU based on eIDAS regulation and eSignature Directive
- Sustainable solution based on standard documents and offering interoperability with external software (past and future)

### Process Control

- Compliance enforced in all processes

### Improved Corporate Image

- Better user experience
- Innovation oriented company
- Technology-aware

### Cost Saving

- No need to print the document to sign it
- No need for contract scanning and physical archiving
- Automatic integration in Back-End and ECM systems
